The iNAP One Sleep Therapy System is designed to provide a comfortable sleep experience for obstructive sleep apnea (OSA) patients. During sleep, the iNAP One system creates a gentle vacuum within the oral cavity by stabilizing the tongue and freeing the airway, thereby allowing for uninterrupted rest.

Unlike traditional CPAP machines, the iNAP One system works without a facial mask or a bulky machine and instead uses a discreet soft oral interface and a pocket-sized console. The system provides an intuitive user interface with a built in rechargeable battery and an easy-to-clean saliva container, making it a perfect travel companion.

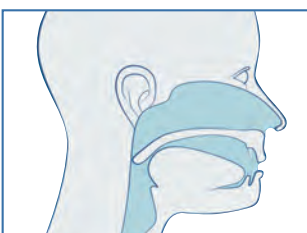

BRONZE A' DESIGN AWARD
IF DESIGN AWARD
ERS POINT AWARD

European Respiratory Society International Congress 2016

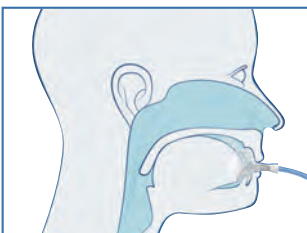

"I like the simplicity of this device and the fact that it 'thinks outside the box' of conventional approaches to sleep apnoea treatment. It gets around one of the biggest stumbling blocks of continuous positive airway pressure compliance (mask discomfort) in a fairly novel and clever way."

Brendan G. Cooper Lung Function and Sleep, Queen Elizabeth Hospital Birmingham NHS Foundation Trust, UK
